

Lake Norman Christian School Adopts SMART Board Interactive Whiteboard Technology

Lake Norman Christian School is first area school to commit to SMART Board technology in all grades

Lake Norman Christian School announces the installation of SMART Board™ interactive whiteboards at its Huntersville campus. Lake Norman Christian chose SMART products because they enhance lesson delivery and increase student engagement, and plans to use the technology in all classrooms. Simply by pressing on the interactive whiteboard's large, touch-sensitive surface, teachers use the SMART Board interactive whiteboards to access interactive lessons, Internet resources and digital materials to appeal to multiple learning styles. "With SMART Board interactive whiteboards our teachers are able to serve individual student learning needs," says Dave Walters, Head of School at Lake Norman Christian School. "Overall, SMART Board interactive whiteboards provide an environment for students to be explicitly taught how to maximize use of computers as a means of serving their purpose, to provide them with skills they'll undoubtedly need in the future. Parents can also stay involved with their child's learning through internet-enabled access to lessons, grades, assignments, and teacher communications."

About SMART Board interactive whiteboards

The SMART Board interactive whiteboard is a large, touch-sensitive display. Connected to a computer and projector, the interactive whiteboard is like a giant computer screen that students and teachers simply touch to operate. Using their finger as a mouse, teachers and students can access and control any computer application, file or multimedia platform, including the Internet, CD-ROMs and DVDs. They can also write over applications in digital ink, then save their work for future study and review. The SMART Board interactive whiteboard engages students with diverse learning styles by providing both immediate access to a wide range of digital materials and a common focus for the entire class – not something easily achieved with other technologies. It is the number one choice among primary and secondary school educators in more than 75 countries worldwide because the pioneering software interface captures the imagination of students of all backgrounds and abilities in order to help them learn together, understand better and achieve more.
